

SNOW | INVENTORY™

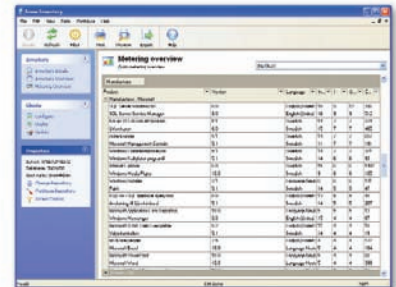

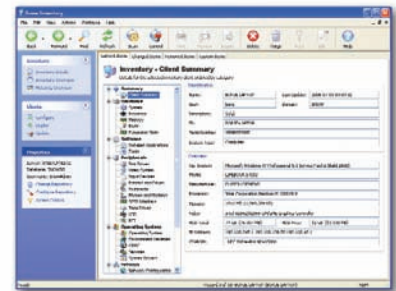

Snow Inventory supplies you with complete information about all software and hardware within your network.

With complete and accurate information, Snow Inventory allows you to do more than just reactively monitor status.

The product enables you to proactively manage usage, actively resolve issues and analyze changes and usage within the network.

Benefits

Software policy enforcer

Strengthen your software policy with Snow Inventory by preventing illegal software from being used on your machines.

Monitor your software usage and lower costs

Measure your software usage in order to re-use or uninstall un-used software. Control your license compliance by comparing the software installations with your license agreements.

Track changes

Keep track of all hardware and software changes on your computers in order to correct misuse or analyze future needs depending on historical changes.

Ensure your security level

Monitoring and keeping your security compliance has never been easier. With Snow Inventory you are always updated with your machines status for service pack, virus definition etc.

Effective planning and budgeting

Avoid surprises when planning upgrades or changes. With complete and accurate data from the start you will have complete control over both your time and project plan.
