

SNOW LICENSE MANAGER™

Snow License Manager ensures central control of all your contracts and software licenses as well as enables you to track actual usage.

With local administration and built in report generation, Snow License Manager creates, controls and supports the management of your software assets.

From license registration, contract and cost management to usage analyzes, the product facilitates the complete life cycle in accordance with ISO standard 19770.

Control where, when and how much your software is used in order to maximize your usage and avoid unnecessary costs.

Benefits

Manage your software agreements

Store and manage contracts for applications, agreements, services and support. Assure purchases towards contracts and monitor the financial impact of specific contracts.

Recycle and avoid unnecessary license cost

Make sure that you are using all your software assets. Easily re-distribute unused licenses within your organization.

Maximize your SMS® investment

Combine Snow License Manager with Microsoft SMS to get a complete Software Asset Management tool.

Manage different types of licenses

Manage various types licenses, for example concurrent user based licenses and concurrent devices based licenses for use in Terminal Server or Citrix environments.

Ensure that standards are complied with

With full control on software policies as well as complete information on all hardware, you can easily maintain and monitor your software and hardware standards.

Track costs and ownership

Keep track of your assets through control over your license ownerships. Identify which cost centre is using which licenses. Use the information for budgeting and internal invoicing.
